

C-LOCK SE features:

- Absolutely new & unique Locking System solution for high end AC Mains Connection.
- Functional apparently with all power cords with diameter from 35 to 41 mm.
- Smart construction & User's friendly.
- Ultimate Furutech FT-SWS NCF Rhodium plated mounted in.
- Reference quality of make.
- Thanks to C-LOCK your cable will not be hanging down anymore.

The unique magnesium NUTE as one of the key components of the Locking System ensures a perfect connection of the AC power cord to the wall-socket, eliminating vibration and supports the wall socket against breaking out of the wall. The extruded surface allows easy mounting of the Nute and accurate thread tightening. Perfect inside thread processing offers smooth running during tightening. Its very special fine silk anodizing secures long-term usage without surface damage and color stability.

The customized highest quality pure silicone O-RING with exact deformation attributes ensures domain functionality of whole Locking System. Due to its deformation during nut tightening, it exerts a consistent pressure on the power connector with respect to power connector surface protection.

The THREADED FRAME is made of high-grade stainless steel with exact specifications to provide extra high strength. This material has been chosen based on years of experience in the development of the high-end power circuits of devices with respect to electromagnetic compatibility at high current (or power) loads. The excellent properties of this used material guarantee that the connected power sockets retain all their declared electromagnetic properties without any, even slightest, negative effect of this socket.

The aluminum COVER as the main supporting base for the threaded frame ensures reliable functioning of whole Locking System. Its ultimate design joins

to your high end chain by its perfect surface finishing and aesthetic character suitable for all high end listening rooms or living rooms. Also the cover is made in highest quality anodizing which secures long-term usage without surface damage.

Highest quality wall outlet socket Furutech FT-SWS NCF Rhodium plated (2-pole+earth; Rating: 16 A 250 V A. C.).

Nano Crystal Formula – Nano Crystalline, Ceramic and Carbon Powder Incorporated into new NCF series of Furutech products, Nano Crystal² Formula – NCF is comprised of a special crystalline material that has two "active" properties. First, it generates negative ions that eliminate static and secondly, it converts thermal energy into far-infrared. Furutech then combines this remarkable crystalline material with nano-sized ceramic particles and carbon powder for their additional "Piezo Effect" damping properties. The resulting Nano Crystal Formula is the ultimate electrical and mechanical damping material – only found in Furutech products.

Designed and manufactured in Czech Republic by Blockaudio s. r. o., Vodární 1179/1a, 779 00 Olomouc / www.C-LOCK.eu
